- A) Bernoulli's equation is applicable.
- B) The flow velocity remains constant.
- C) The pressure remains constant.
- D) Viscous forces are dominant.

Answer: A) Bernoulli's equation is applicable.

Explanation:

Bernoulli's equation applies under the assumptions of incompressible, inviscid, steady flow along a streamline. It relates pressure, velocity, and elevation head. The flow velocity and pressure can vary along the streamline, but the equation holds true only if the assumptions are met.

Question 2:

The Reynold's number for flow in a pipe is 2500. The flow is likely to be:

- A) Turbulent.
- B) Laminar.
- C) Transitional.
- D) Steady.

Answer: C) Transitional.

Explanation:

Reynold's number (Re) indicates flow regime: $Re > 4000$ indicates turbulent flow, and Re between 2000 and 4000 is transitional. At 2500, the flow is in the transitional zone.

Conclusion and Future Outlook

Fluid mechanics objective questions and answers are a vital educational tool that facilitate quick assessment, reinforce learning, and prepare students for challenging examinations. Their effectiveness hinges on a balanced blend of conceptual understanding and problem-solving skills. Deep Dive into Key Topics and Sample Questions

- Basic Mechanical Principles

Understanding foundational mechanical concepts is essential. These questions test your knowledge of force, work, energy, levers, and simple machines.

Sample Question:

If a lever is used to lift a weight of 200 kg with a fulcrum placed 2 meters from the load and the effort applied is 0.5 meters from the fulcrum, what is the effort force required?

Solution:

Using the principle of levers:

$$\text{Effort} \times \text{effort arm} = \text{load} \times \text{load arm}$$

$$\text{Effort} \times 0.5 = 200 \text{ kg} \times 2$$

$$\text{Effort} = (200 \times 2) / 0.5 = 400 / 0.5 = 800 \text{ kg}$$

Answer: An effort of approximately 800 kg is required.

- Gear and Pulley Systems

Questions on gear ratios, pulley configurations, and mechanical advantage are common since they directly relate to machinery operation.

Sample Question:

A gear train consists of three gears. The first gear (driver) has 20 teeth, the second gear (idler) has 40 teeth, and the third gear (driven) has 20 teeth. What is the gear ratio between the driver and the driven gear?

Solution:

Gear ratio = Number of teeth on driven / Number of teeth on driver

$$= 20 / 20 = 1:1$$

Result: The system provides a 1:1 gear ratio, meaning the driven gear rotates at the same speed as the driver gear.

- Fluid Mechanics

In the oil and gas industry, understanding fluid properties and flow is crucial, especially for pipelines and pumps.

Sample Question:

A pipeline transports oil at a pressure of 150 psi and a velocity of 5 m/s. If the diameter of the pipe is 0.3 meters, what is the volumetric flow rate?

Solution:

First, find the cross-sectional area of the pipe:

$$\text{Area} = \pi \times (d/2)^2 = 3.1416 \times (0.3/2)^2 = 3.1416 \times 0.0225 = 0.0707 \text{ m}^2$$

$$\text{Flow rate (Q)} = \text{area} \times \text{velocity} = 0.0707 \text{ m}^2 \times 5 \text{ m/s} = 0.3535 \text{ m}^3/\text{s}$$

Result: The volumetric flow rate is approximately 0.35 cubic meters per second.
